## Abstract

Briefly describe the problem, approach, and key results (150–250 words).

## 1 Dataset

(Length of the section: ~1 page)

- Dataset source
- Size and description
- Preprocessing steps
- Train/validation/test split
- Make appropriate use of tables or graphs for representing dataset

## 2 Methodology

(Length of the section: ~2 page)

- Describe the baseline approach
- Describe your model(s), architecture, or pipeline
- Describe training details (e.g., hyperparameters, tools/libraries used)
- Make appropriate use of figures, tables and graphs
- Create subsections if necessary for better organization

## 3 Results

(Length of the section: ~1 page)

- Describe the results you obtained
- Make appropriate use of tables and graphs
- Create subsections if necessary for better organization

## 4 Discussion

(Length of the section: ~1 page)

- Discuss the MOST INTERESTING parts of your results

- What worked / didn't work
- Limitations

## **References**

- Add your references here (or use BibTeX)

## **Appendix (Optional)**

Additional material, examples, or outputs.
